

### Application

Tight-closing, triple eccentric high-pressure butterfly valve for process engineering and plants with industrial requirements

**Nominal size** NPS 3 to 80 · DN 80 to 2000

**Nominal pressure** ANSI Class 150 to 2500 · PN 10 to 400

**Temperatures** -196 to 1000 °C

Triple eccentric Type LTR 43 Control and Shut-off Butterfly Valve with zero leakage designed for bi-directional service at full differential pressure.

Valve body material

- Carbon steel
- Stainless steel
- Special materials

Valve body style

- Wafer
- Lug-type (valve for dead-end service)
- Double-flanged
- Welding ends

Seat ring material

- 316 SS stainless steel/graphite laminated seal
- 316 SS stainless steel stellite
- Filled PTFE
- Special materials

The butterfly valves can be equipped with various actuators, positioners, solenoid valves as well as other accessories.

### Versions

#### Standard version

- **Type LTR 43** · Wafer-style butterfly valve conforming to API 609 and DIN specifications

#### Other versions

- Lug type body conforming to API 609 and DIN specifications
- Double-flanged valve body according to BS 5155/ISO 5752 specifications
- Face-to-dimensions according to ANSI B 16.10 and DIN
- Fire-safe design conforming to BS 6755 Part 2, API 607 and API 6FA
- Cryogenic version down to -196 °C
- High-temperature version up to +1000 °C
- Alternative materials for valve body and internal parts: Duplex, bronze, Monel, Incoloy, Hastelloy B and C, titanium and zirconium

Fig. 1 · Type LTR 43 High-pressure Butterfly Valve in double-flanged version, NPS 10, Class 1500 with pneumatic actuator and positioner

Fig. 2 · Tight-closing Type LTR 43 Butterfly Valve, lug-type, metal sealing with manual gear

### Principle of operation

The process medium can flow through the butterfly valve in both directions. The valve flow coefficient depends on the opening angle of the disc and the area released between the disc and valve body.

The valve is sealed by a metal/graphite laminated seal stack (seat) inserted in between the body and the metal disc edge (LTR 43-1) or by the metal seat ring screwed onto the disc (LTR 43-2). The seat adapts itself to the disc or seat ring. The friction forces are minimized by the triple eccentric design of the disc and shaft.

### Fail-safe position

Pneumatic rotary actuators have two fail-safe positions which become effective when the actuator is relieved of pressure as well as when the supply air fails:

#### Valve CLOSED without supply air

The butterfly valve closes when the supply air fails.

#### Valve OPEN without supply air

The butterfly valve opens when the supply air fails.
