#### T 8384-4 EN

#### Series 3730

Type 3730-4 Electropneumatic Positioner with PROFIBUS-PA communication

## **Application**

Positioners for attachment to pneumatic control valves

#### Valve travel from 3.6 to 300 mm · Opening angle 24 to 100°

Smart, bus-powered field device complying with PROFIBUS-PA specifications based on IEC 61158-2 transmission technology

The microprocessor-controlled positioner compares the set point cyclically transmitted over the PROFIBUS-PA network to the travel or opening angle of the control valve and issues a corresponding output signal pressure.

The Type 3730-4 Positioner communicates using PROFIB-US-PA specification according to IEC 61158 and IEC 61784 to exchange data with programmable logic controllers, automation systems and various engineering tools.

#### Special features

- PROFIBUS-PA Profile 3.01 certified positioner fulfilling all compulsory requirements of PROFIBUS-PA Profile 3.02
- Automatic ID adaptation according to PROFIBUS-PA Profile 3.02 to facilitate replacement of positioners with Profile 2.0 or 3.0 (e.g. Type 3785)
- Classified status alarms acc. to NAMUR Recommendation NE 107
- DTM file available to integrate the positioner into FDT/ DTM in compliance with specification 1.2
- Simple attachment to all common linear and rotary actuators
  - SAMSON direct attachment (Fig. 1)
  - NAMUR rib (Fig. 2)
  - Attachment to rod-type yokes acc. to IEC 60534-6-1
  - Attachment according to VDI/VDE 3847
  - Rotary actuator attachment according to VDI/ VDE 3845 (Fig. 3)
- Any desired mounting position of the positioner (but not suspended)
- Single-knob, menu-driven operation
- Automatic start-up
- LCD easy to read in any mounted position due to selectable reading direction
- Integrated EXPERTplus diagnostics for control valves (> T 8389)
- Online changing of control parameters
- Automatic zero monitoring
- Calibrated travel sensor without gears susceptible to wear

- Permanent storage of all parameters (protected against power failure)
- Negligible influence of temperature and supply air
- Adjustable output pressure limitation
- Activatable tight-closing function
- Binary input for DC voltage signals

#### Additional options

- Inductive limit contact with proximity switches
- Integrated solenoid valve
- Binary input for floating contact
- External position sensor (Fig. 4)
- Stainless steel housing

#### Principle of operation

The positioner is mounted on pneumatic control valves and is used to assign the valve position (controlled variable x) to the control signal (set point w). The positioner compares the electric control signal of a control system to the travel or rotational angle of the control valve and issues a signal pressure (output variable y) for the pneumatic actuator.

The positioner mainly consists of an electric travel sensor system, an analog i/p module with a downstream air capacity booster and the electronics with the microcontroller.

When a set point deviation occurs, the actuator is either vented or filled with air. If necessary, the signal pressure change can be slowed down with a volume restriction that can be connected as necessary. Using the software, the signal pressure to the actuator can be limited to 1.4, 2.4 or 3.7 bar.

The fixed flow regulator ensures a constant air flow to the atmosphere, which is used to flush the inside of the positioner housing and to optimize the air capacity booster. The i/p module is supplied with a constant upstream pressure by the pressure regulator to compensate for any fluctuations in the supply pressure.

The positioner communicates and is powered using IEC 61158-2 transmission technology conforming to PROFIBUS-PA specifications.

As a standard feature, the positioner comes with a binary input for DC voltage signals to signalize process information over the PROFIBUS-PA network.

#### Operation

A single rotary pushbutton facilitates operation. The parameters are selected by turning the rotary pushbutton, pushing it activates the required setting. In the menu, all parameters are listed in one level, meaning there is no need to search in submenus. All parameters can be checked and changed on site.

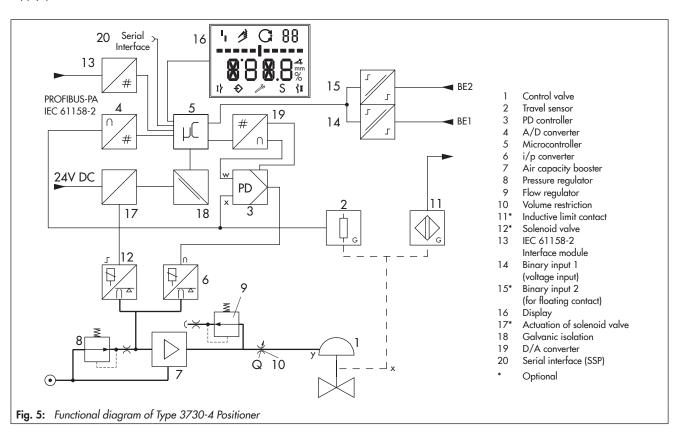

All values are displayed on the LCD. The reading direction of the LCD can be rotated by 180°.

The closing direction of the control valve is indicated to the positioner by setting the DIP switch "Air to open/Air to close". It assigns the CLOSED position of the control valve to the 0 % reading.

The INIT key activates initialization which is started according to the ready adjusted parameters. After initialization is completed, the positioner immediately starts closed-loop operation.

### **Configuration using TROVIS-VIEW**

The SAMSON configuration software, TROVIS-VIEW, can be used to configure the positioner. For this purpose, the positioner is equipped with an additional digital interface to be connected to the RS-232 interface of a PC. TROVIS-VIEW adapts the positioner to any process requirements and allows the process to be checked while the process is running. The control valve is connected to the process over the PROFIBUS-PA network.

<sup>1)</sup> EC type examination certificate 2) Statement of conformity

#### Electrical and bus connection

The Type 3730-4 Positioner with PROFIBUS-PA communication must be connected to bus segments complying with IEC 61158-2 requirements. A shielded two-wire line is used for both supply power and data communication.

#### Mounting the positioner

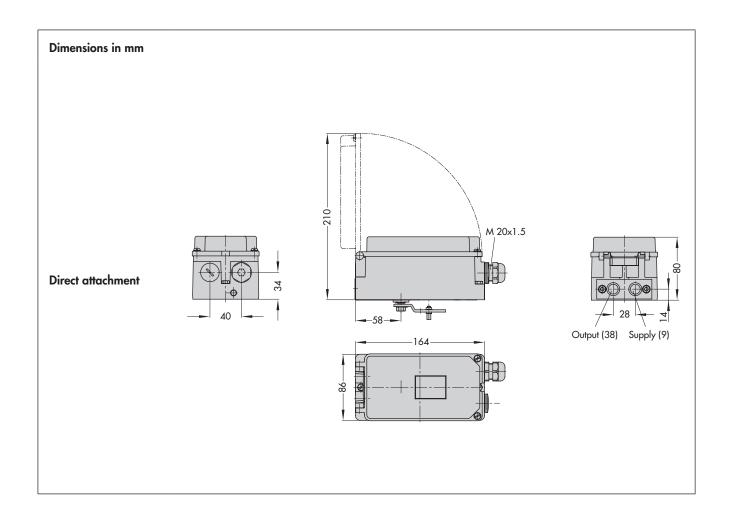

The Type 3730 Electropneumatic Positioner can be attached directly to the Type 3277 Actuator (175 to 750 cm²) over a connection block. In actuators with "actuator stem extends" fail-safe action, the signal pressure is routed over an internal hole in the actuator yoke to the actuator. In actuators with "actuator stem retracts" fail-safe action, the signal pressure is routed to the actuator over ready-made external piping.

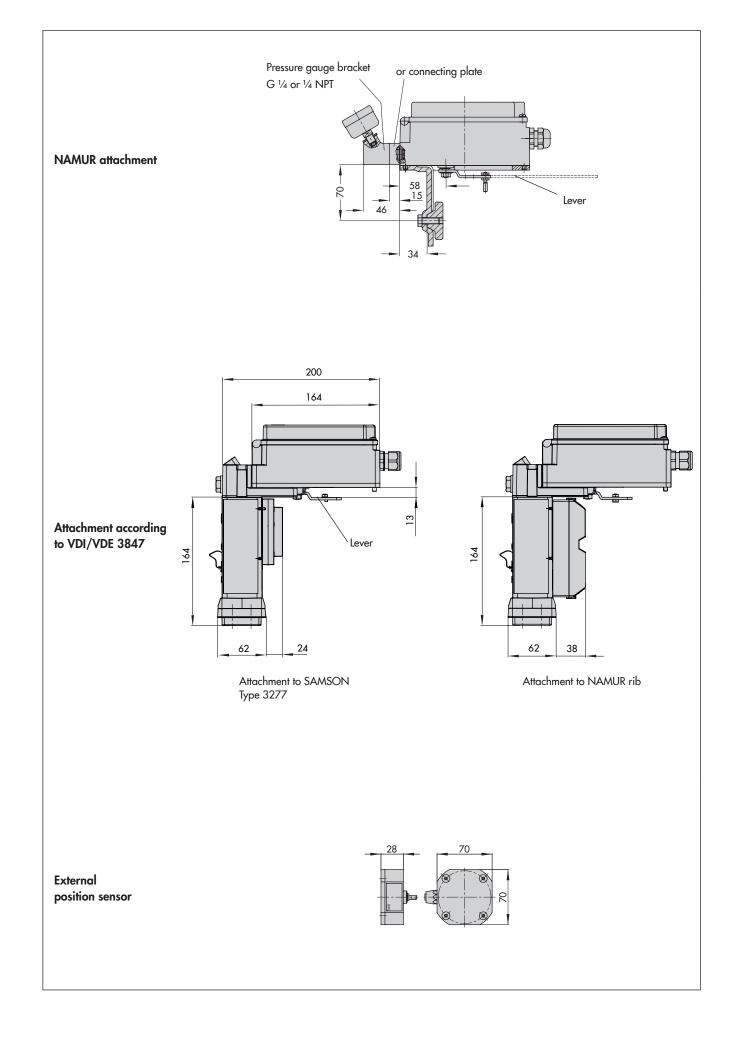

Using the appropriate bracket, the positioner can also be attached according to IEC 60534-6-1 (NAMUR recommendation). The positioner can be mounted on either side of the control valve.

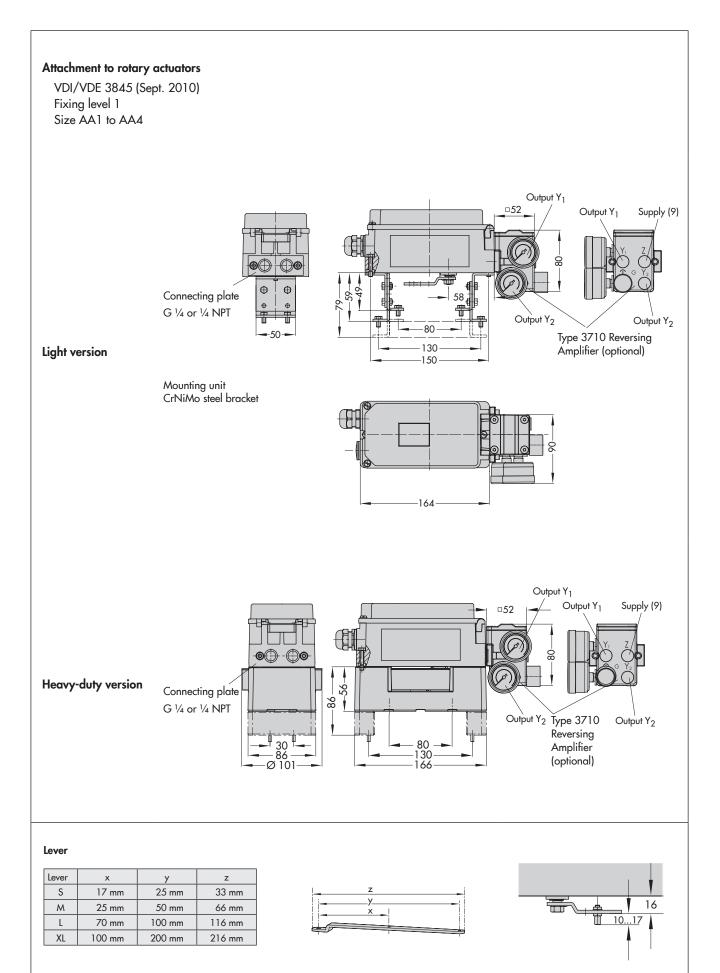

A pair of universal brackets is used for the attachment to Type 3278 Rotary Actuators or other rotary actuators according to VDI/VDE 3845. The rotary motion of the actuator is transferred to the positioner over a coupling wheel with travel indication.

A special version of the positioner allows it to be attached according to VDI/VDE 3847. This type of attachment allows the positioner to be replaced quickly while the process is running by blocking the air in the actuator. The positioner can be attached directly to the Type 3277 Actuator using an adapter bracket or adapter block. Alternatively, it can be attached to the NAMUR rib of a control valve using an additional NAMUR connection block.

A reversing amplifier is necessary for double-acting, springless actuators for the second opposing signal pressure.

## Ordering text

Type 3730-4... Positioner

- Without pneumatic connecting rail (only when directly attached to Type 3277)
- With pneumatic connecting rail ISO 228/1-G 1/4
- With pneumatic connecting rail ¼-18 NPT
- Without/with pressure gauge up to max. 6 bar
- Attachment to Type 3277 Actuator (240 to 700 cm²)
- Attachment according to IEC 60534-6-1 (NAMUR)
   Valve travel: ... mm, if applicable, rod diameter: ... mm
- Attachment according to VDI/VDE 3847
   Valve travel: ... mm, if applicable, rod diameter: ... mm
- Attachment to Type 3278 Rotary Actuator (160/320 cm²), mounting unit with CrNiMo steel bracket or heavy-duty attachment
- Attachment to rotary actuators acc. to VDI/VDE 3845, mounting unit with CrNiMo steel bracket or heavy-duty attachment
- Pneumatic reversing amplifier for double-acting actuators with connection acc. to ISO 228/1-G ¼ or ¼-18 NPT
- Adapter M20x1.5 to ½ NPT
- Metal cable gland
- Special version: housing made of CrNiMo steel
